Education

Vellore Institute of Technology, B.Tech in Computer Science and Engineering Jul 2024 – Jul 2028

- CGPA: 9.03/10

Technical Skills

Languages: C, C++, Python, Java, JavaScript
Frameworks: React.js, Node.js, TailwindCSS, GSAP, EJS
Tools & Technologies: Git, Docker, Postman, Chrome Extension APIs, REST APIs, Shell Scripting
Databases: PostgreSQL, MongoDB, Firebase
Problem Solving: Solved 300+ DSA problems across LeetCode, Codeforces, and CodeChef.

Experience

Senior Core Member, IEEE CS VIT– Vellore, Tamil Nadu Apr 2025– Current

• Designed competitive programming questions for BattleCode, an event with 100+ participants.

Freelance Web Developer | Artist Portfolio Website:

• Developed a responsive artist portfolio website using React.js, JavaScript, CSS to showcase artwork and improve online visibility.

Projects

Let's Leet Chrome Extension: **GitHub**

• Developed a Chrome extension that provides AI-generated hints and debugging assistance directly on LeetCode problem pages.
• Implemented Firebase authentication and Firestore to support user accounts and friend-based leaderboards.
• Created dynamic content scripts that detect problem pages and inject contextual hints without disrupting the workflow.

Technologies: JavaScript, Chrome Extension APIs, Firebase, Firestore, REST APIs

GlobeQuest: **Full Stack |** GitHub

• Built an interactive geography web game where players guess global locations using visual clues and map-based interactions.
• Implemented dynamic scoring, progressive difficulty levels, and real-time leaderboard using Firebase.
• Designed responsive UI and game logic to increase engagement and replayability.

Technologies: Ejs, JavaScript, CSS3, Firebase Realtime Database, Node js, Express js

Twitter-like Social Platform: **Full Stack |** GitHub

• Designed and developed a full-stack social media platform with user authentication, follow system, personalized feed, and profile management using a relational PostgreSQL schema.
• Implemented core social features including posts, comments, voting, user search with prefix matching, and event-driven notifications with pagination and rate-limited APIs.
• Built scalable backend architecture with JWT authentication, authorization checks, soft deletion, indexing for optimized queries, and efficient feed retrieval using joins and pagination.

Tech Stack: Node.js, Express.js, PostgreSQL, JavaScript, JWT Authentication, REST APIs, Rate Limiting, Search, Pagination

Achievements

• 1st Place – IEEE CS Internal Hackathon for building Let's Leet.
• Ranked Top 10 in the ACM C2C Hackathon for building GlobeQuest, an interactive geography game.
• Selected among Top 50 teams nationwide for developing an AI-powered log investigation framework.
